FBoS Release No: 85, 2020

20th October, 2020

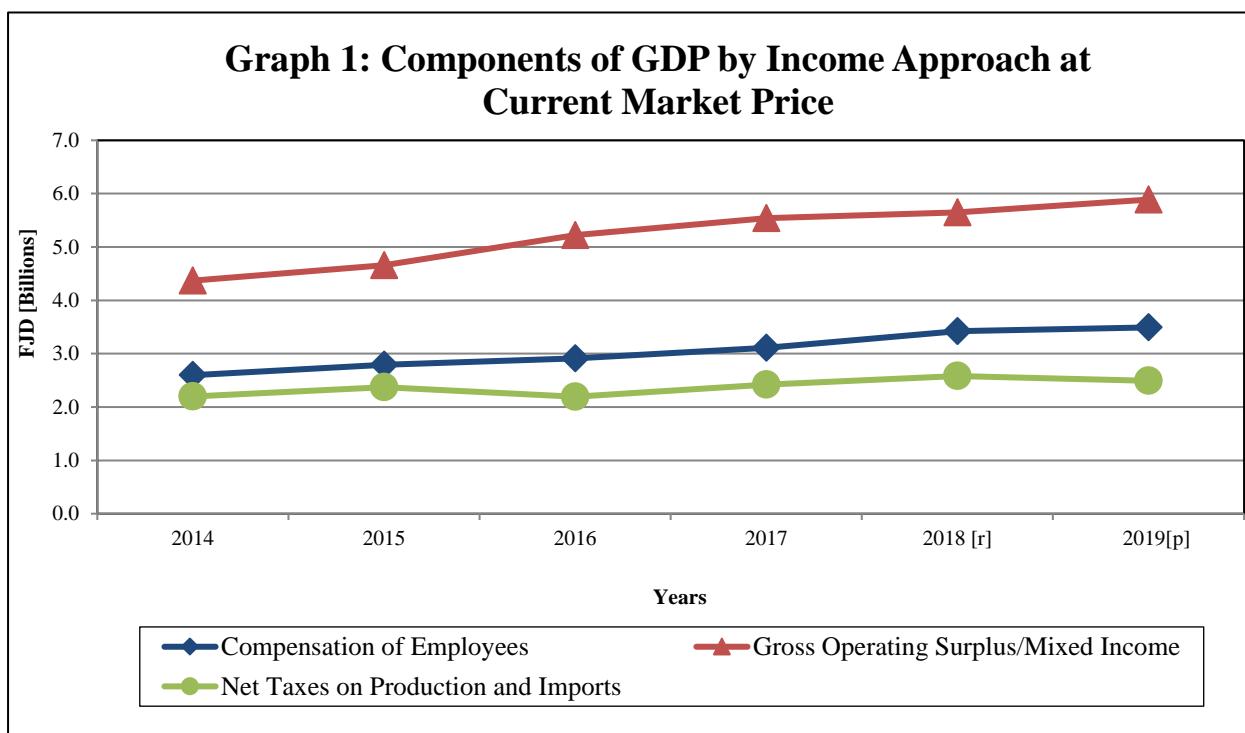

FIJI'S GROSS DOMESTIC PRODUCT (GDP) 2019 INCOME APPROACH AT CURRENT PRICES

The income approach to measuring GDP sums the incomes generated by the production process. Income is generated for different institutional units in the economy during the production process, for instance through the sale of materials for use as inputs by other establishments, receipts by owners for the use of their capital and the net tax receipts by government. Hence GDP can be calculated as a sum of Compensation of Employees (COE), Gross Operating Surplus/Mixed Income (GOS/MI) and Net taxes on Production and Imports.

The 2019 estimate of \$11.9 billion is made up of the following components:

- 1) Gross Operating Surplus/Mixed Income (GOS/MI): \$5.9 billion (49.6%);
- 2) Compensation of Employees (COE): \$3.5 billion (29.4%); and
- 3) Net taxes on Production and Imports (Net taxes on product plus other net taxes on production): \$2.5 billion (21.0%).

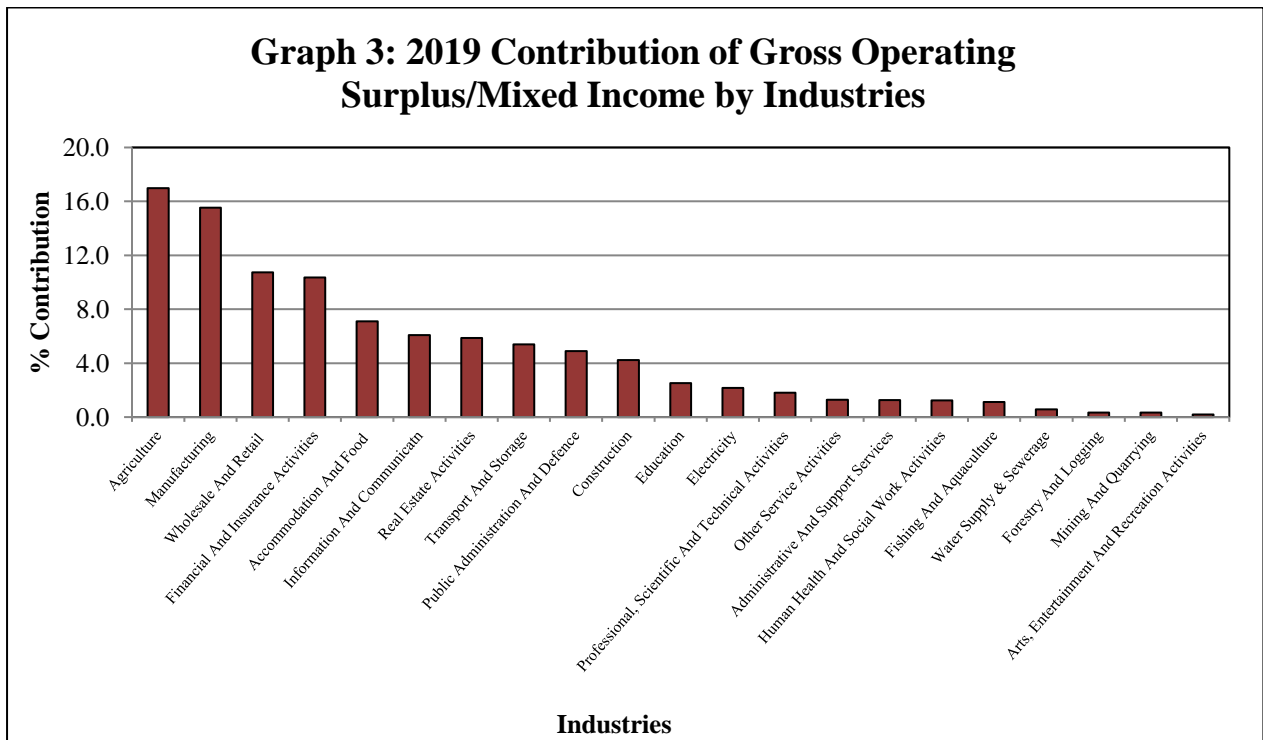

Graph 1 below shows the movements in the components of GDP by Income over the period 2014 to 2019.

Compensation of employees grew by 2.0 percent (\$0.1 billion) in 2019 when compared to 2018. Graph 2 above shows the contribution of the different industries to the compensation of employees total. The top 5 industries in terms of contribution to total compensation of employees are Education (17.1%), Public Administration and Defence (16.1%), Wholesale & Retail (10.4%), Transport & Storage (8.7%) and Manufacturing (7.6%).

In 2019, gross operating surplus/mixed income increased by 4.3 percent (\$0.2 billion) when compared to 2018. Graph 3 below shows the contribution of the different industries to the gross operating surplus/mixed income total. The top 5 industries in terms of contribution to total gross operating surplus/mixed income are Agriculture (17.0%), Manufacturing (15.5%), Wholesale & Retail (10.7%), Financial & Insurance Activities (10.3%) and Accommodation and Food Services (7.1%).

Appendix 4: Technical Notes

Gross domestic product (GDP) by income - the income measure of gross domestic product (GDP) is derived as compensation of employees plus gross operating surplus/mixed incomes plus taxes less subsidies on both production and imports.

Compensation of employees (COE) - is the total remuneration in cash or in kind payable by employers to the employees for the work done. Direct social transfers from employers to their employees or retired employees and their family, such as payments for sickness, educational grants and pensions that do not set up an independent fund, are also imputed to compensation of employees.

Gross operating surplus/mixed income – gross operating surplus is the residual obtained by deducting the above components from value added. Thus, gross operating surplus includes interest payable to lenders of financial assets, or rent payable to rentiers of non-produced assets, such as land and sub-soil assets. Mixed income is the surplus or deficit accruing from production by unincorporated enterprises owned by households; it implicitly contains an element of remuneration for work done by the owner, or other members of the household, that cannot be separately identified from the return to the owner as entrepreneur but it excludes the operating surplus coming from owner-occupied dwellings.

Subsidies - are current unrequited payments that government units, including non-resident government units, make to enterprises on the basis of the levels of their production activities or the quantities or values of the goods or services that they produce, sell or import and subsidies are not payable to final consumers. It also do not include grants that governments may make to enterprises in order to finance their capital formation. Examples of subsidies are freight, fertiliser, weedicide, cocoa subsidies and other such grants to statutory boards or public corporations.

Taxes on production and imports: are classified as receipts in the income and outlay account and includes:

- **Taxes on products** - payable on goods and services when they are produced, delivered, sold, transferred or otherwise disposed of by their producers. Examples of taxes on products used are import, export& excise duties and value added tax.
- **Other taxes on production** - consist of all taxes except taxes on products that enterprises incur as a result of engaging in production. Examples of other taxes on production are stamp duties, business licences and rates.
